1.   A method of delivering electronic content, the method comprising the steps of:

providing instructions that cause a first computer to dynamically transmit information including an e-mail address to a second computer in response to a request for information;

processing the transmitted information at the second computer; and

e-mailing requested information to the email address.

10.   The method of claim 9. wherein the script comprises a Common Gateway Interface script.

20.   A method of delivering electronic content, the method comprising the steps of:

providing web-page form instructions that cause a first computer to dynamically transmit information including an e-mail address from a user to a second computer; and

using the transmitted information at the second computer to select electronic content and e-mailing the selected content to the e-mail address.

21.   A computer-implemented method of providing access to electronic content, the method comprising the steps of:

displaying in a browser a web-page that includes a link corresponding to electronic content;

dynamically transmitting, in response to a user's selection of the link, information including an e-mail address to a remote server; and

sending electronic content from the remote server to the e-mail address based on the transmitted information.

22.   A computer program, disposed on a computer readable medium, the computer program including instructions for causing a first computer's processor to:

receive dynamically transmitted information from a second computer including an email address; and

based on the received information, select electronic content, and transmit the selected electronic content to the e-mail address included in the received information.
